

招生學年度	九十七	招生類別	碩士班、碩士學位學程
系所班別	全球運籌管理研究所		
科目	作業研究		
注意事項	可使用掌上型計算機		

1. Write the dual problems of the following two LP problems.

(a) (10 points)

$$\begin{aligned} \max \quad & \sum_{r=1}^m u_r y_{rk} \\ \text{s.t.} \quad & \sum_{r=1}^m u_r y_{rj} \leq \sum_{q=1}^s v_q x_{qj} \quad (j=1, 2, \dots, n) \\ & \sum_{q=1}^s v_q x_{qk} = 1 \\ & u_r \geq 0 \quad (r=1, 2, \dots, m) \\ & v_q \geq 0 \quad (q=1, 2, \dots, s) \end{aligned}$$

Note that  $k$  is one specific element of  $\{1, 2, \dots, n\}$ .

(b) (15 points)

$$\begin{aligned} \max \quad & \sum_{r=1}^m u_r y_{rk} + \sigma \\ \text{s.t.} \quad & \sum_{r=1}^m u_r y_{rj} + \sigma \leq \sum_{q=1}^s v_q x_{qj} \quad (j=1, 2, \dots, n) \\ & \sum_{q=1}^s v_q x_{qk} = 1 \\ & u_r \geq 0 \quad (r=1, 2, \dots, m) \\ & v_q \geq 0 \quad (q=1, 2, \dots, s) \\ & \sigma \text{ unrestricted} \end{aligned}$$

Note that  $k$  is one specific element of  $\{1, 2, \dots, n\}$ .

2. (25 points) Suppose we are given a set  $J$  of candidate facility locations and a set  $I$  of demand points. Let  $b_i$  be the demand at node  $i$ ,  $P$  be the number of facilities to locate, and  $N_i$  be the set of all candidate locations that can cover demand node  $i$ . Formulate an IP to select  $P$  facility locations to maximize the total covered demands.

3. Consider the LP

$$\begin{aligned} \max z = & \sum_{j=1}^n c_j x_j \\ \text{s.t.} \quad & \sum_{j=1}^n a_{ij} x_j \leq b_i \quad (i=1, 2, \dots, m) \\ & x_j \geq 0 \quad (j=1, 2, \dots, n) \end{aligned}$$

(a) (5 points) Write the dual problem.

(b) (5 points) State the weak duality property.

招生學年度	九十七	招生類別	碩士班、碩士學位學程
系所班別	全球運籌管理研究所		
科目	作業研究		
注意事項	可使用掌上型計算機		

- (c) (5 points) State the strong duality property.  
(d) (5 points) State the optimality property.  
(e) (5 points) State the unboundedness property.

4. Consider the nonlinear program

$$\max z = x_1 \times x_2$$

s.t.

$$x_1 + x_2 = 8$$

- (a) (10 points) Solve the problem using the Karush-Kuhn-Tucker (KKT) conditions.  
(b) (15 points) Verify that the solution is a saddle point.
